

WHERE FUTURE BEGINS...

Orthoboom® Autumn/Winter
2026-2027

Dear friends!

We are pleased to present our new catalog of adult orthopedic footwear for the Autumn–Winter 2026–2027 season, inspired by the theme “Where the Future Begins.”

The future does not begin tomorrow. It begins here — with a step. We live in a world where movement requires courage: to move forward through uncertainty, through change, through time. For more than 20 years, Orthoboom has been creating footwear that supports this movement — confident, conscious, alive.

Every pair of Orthoboom shoes is not just comfort and orthopedic precision. It is an impulse to go further. Not to follow trends, but to feel your own rhythm. Not to stop, but to choose your path.

We believe that a step is more than an action. It is a choice. It is energy. It is the beginning of the future that each person creates for themselves.

The Orthoboom Autumn–Winter 2026–2027 collection is for those who move forward not because they have to, but because they cannot do otherwise. When warmth becomes a form of strength. When movement is fashion, and nature. When footwear knows how to support every next step.

Orthoboom — where the future begins.

Orthoboom Comfort Collection

Orthoboom Comfort footwear is recommended for the following conditions and deformities:

- static foot insufficiency and flat feet;
- calluses and corns on the plantar surface of the foot, as well as heel spurs;
- hallux valgus deformity;
- hammertoe deformity;
- signs of varicose vein disease in the legs;
- static load on the legs for more than 4 hours a day (especially recommended for people whose work requires them to be on their feet all day);
- pregnancy;
- excess body weight;
- previous leg and spinal injuries;
- for comfortable walking and freedom from leg fatigue throughout the day.

Purpose:

- prevention of progressive foot deformity;
- redistribution of load across the foot in order to reduce pain and fatigue.

100% orthopedic construction

Heel counter:

Firm.
Supports without pressure.

StepEx insole:

Orthopedic.
Hypoallergenic.

Materials:

Genuine leather.
Membrane.

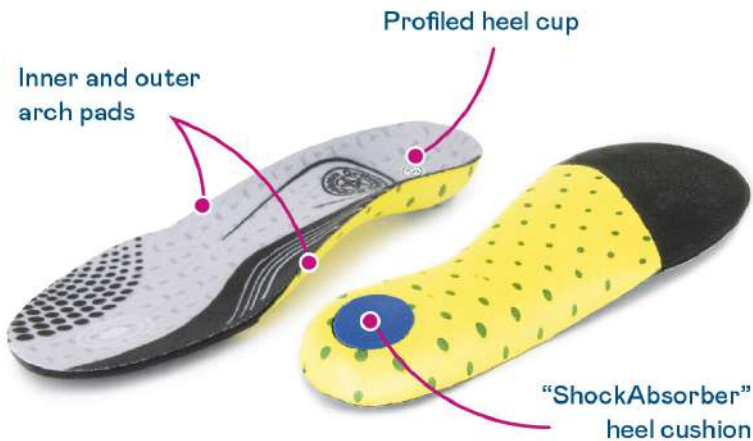

Outsole:

Slip-resistant.
TPR.

Profiled arch-support insole

- It consists of several layers of foamed material with different densities and firmness levels, which ensures optimal distribution of properties across different zones.
- The inner and outer arch pads, along with the profiled heel cup, help maintain the correct heel position and provide prevention against the development of longitudinal flat feet and valgus foot alignment.
- The "ShockAbsorber" heel cushion reliably protects the child's heel from impact loads.
- The top layer of the insole is made of an easy-to-clean textile material resistant to abrasion.

Natural materials

- Made from natural leather or nubuck.
- Features a high-quality lining made of natural materials, allowing the foot to breathe and preventing irritation.
- Breathable.

Lining materials

- Orthoboom footwear uses only modern lining materials with unique properties: they can “breathe,” wick away excess moisture, regulate heat exchange, retain warmth, and keep cold from getting inside.

NATURAL FUR

Thermoplastic rubber outsole

The winter outsole made of **thermoplastic rubber (TPR)** is produced from synthetic rubber, which is stronger than natural rubber while remaining equally flexible.

Advantages of a TPR outsole:

- lightweight, with less mass than other materials;
- does not let moisture through;
- high thermal insulation;
- slip-resistant;
- highly resistant to abrasion;
- provides good cushioning properties, reducing excessive stress on the legs and spine;
- can be made in any color, any shape, and with any pattern.
