

WHERE THE FUTURE BEGINS...

Orthoboom® Autumn/Winter
2026-2027

Dear friends!

We are delighted to present to you the catalog of Orthoboom children's orthopedic footwear for the Autumn–Winter 2026–2027 season, inspired by the theme “Where the Future Begins.”

For more than 20 years, Orthoboom has been creating a space where children can easily be themselves — move, explore the world, dream, and grow. We believe that childhood is not preparation for life, but its beginning. The starting point of humanity's future.

Every Orthoboom model is more than just footwear. It is reliable support, thoughtfully designed down to the smallest detail. It is comfort, safety, and compliance with all orthopedic requirements. It is freedom of movement, where confidence is born.

We transform care into a natural continuation of children's energy — the very force from which the future grows. A step toward knowledge. From play to dream. From dream to action. From action to conscious forward movement.

Orthoboom Autumn–Winter 2026–2027 is a collection where warmth becomes care, and movement becomes the foundation of growth. When footwear does not limit, but supports. When childhood is not a preface, but the beginning of a great story.

Orthoboom — where the future begins.

Children's Collection

Orthoboom® Autumn/Winter
2026-2027

ORTHOBOOM is a **certified manufacturer** of children's footwear. We control product quality at every stage of production.

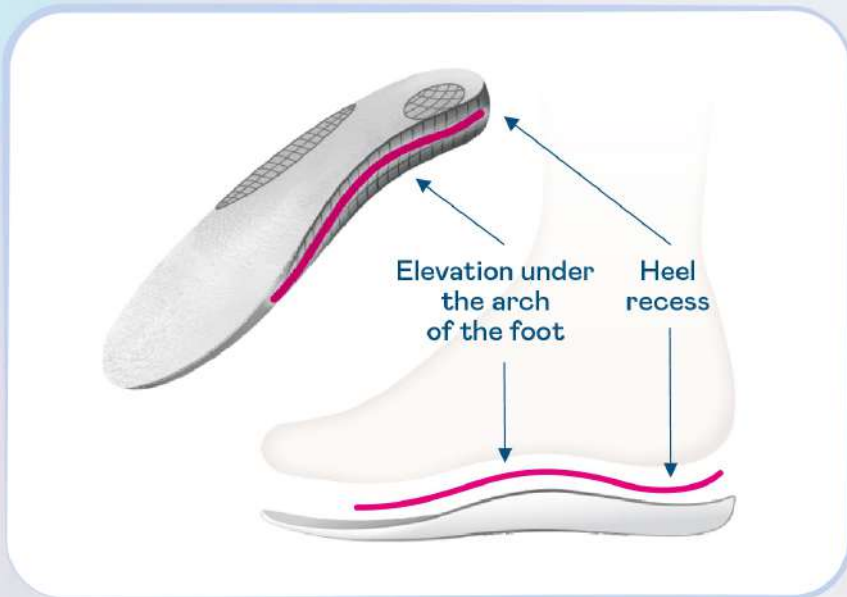

- Orthopedic footwear is manufactured in accordance with GOST RF standards.
- Registration certificate of Roszdravnadzor dated 18.02.2020 No. RZN 2019/8136.
- Our production has been certified according to GOST R ISO 9001-2015 (quality control at all stages of the technological cycle).
- European quality certificate CE.
- Headquarters in Berlin, Germany. Partners — a design bureau in Milan, Italy.
- Production facilities: Germany, Italy, Portugal, China, Korea, Russia.

Removable arch-support insole

The innovative StepEx insole provides gentle support. It promotes the natural healthy development of the foot.

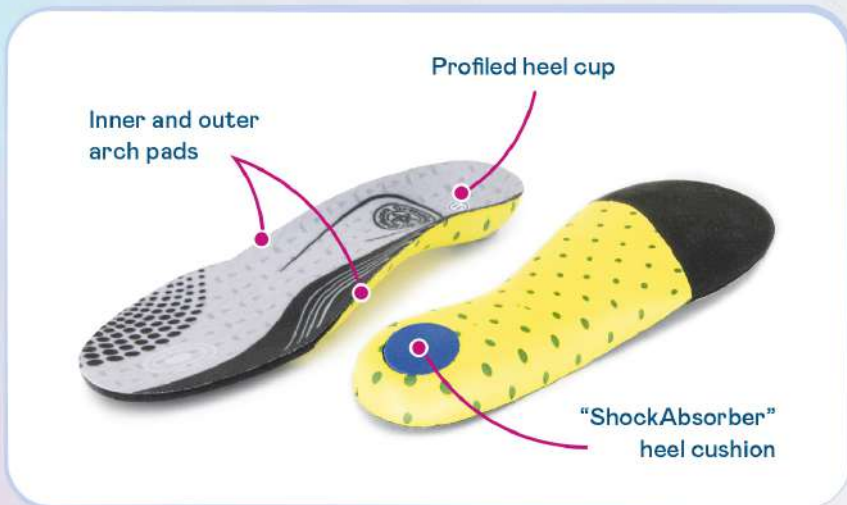

StepEx 

- The heel cup follows the correct anatomical shape of the foot.
- Supports the outer and inner arches of the foot.
- Helps prevent:
 - longitudinal flat feet,
 - lateral (valgus or varus) deviation of the rearfoot.
- Recommended for the prevention and treatment of orthopedic conditions in children in 99% of cases.

Profiled arch-support insole

For all athletic footwear models this season, we use an innovative profiled arch-support insole.

- It consists of several layers of foamed material with different densities and firmness levels, which ensures optimal distribution of properties across different zones.
- The inner and outer arch pads, along with the profiled heel cup, help maintain the correct heel position and provide prevention against the development of longitudinal flat feet and valgus foot alignment.
- The "ShockAbsorber" heel cushion reliably protects the child's heel from impact loads.
- The top layer of the insole is made of an easy-to-clean textile material resistant to abrasion.

Rigid heel counter

Prevent

- Stabilizes and fixes the foot in the correct position.
- Has an extended side wing to eliminate ankle joint instability.
- Improves the foot's rolling motion.
- Prevents further development of foot deformities.
- Promotes proper development of the joint surfaces.

Rigid ankle support

- Made on an orthopedic last with an anatomical profile.
- Close fit to the child's foot due to the molded heel counter on the outer and inner sides of the ankle enhances the therapeutic effect.
- The double-sided ankle support with extended wings securely stabilizes the subtalar and ankle joints, providing a therapeutic effect.
- Ensures the correct position of the heel bone relative to the lower leg.
- Corrects deformities of the joint surfaces.
- Prevents further deformity.

Soft collar

- Softens contact between the lower leg and the edge of the shoe during movement.
- Prevents rubbing.

Hook-and-loop fasteners (velcro, buckles, laces)

- Allow the foot to be fixed firmly and securely inside the shoe.
- Wide opening makes the shoes easier to put on.
- Double stitching on the fasteners allows them to be shortened for the best foot fixation in shoes with different foot widths.

Thermoplastic rubber outsole

The winter outsole made of **thermoplastic rubber (TPR)** is produced from synthetic rubber, which is stronger than natural rubber while remaining equally flexible.

Advantages of a TPR outsole:

- lightweight, with less mass than other materials;
- does not let moisture through;
- high thermal insulation;
- slip-resistant;
- highly resistant to abrasion;
- provides good cushioning properties, reducing excessive stress on the legs and spine;
- can be made in any color, any shape, and with any pattern.

Natural materials

- Made from natural leather or nubuck.
- Features a high-quality lining made of natural materials, allowing the foot to breathe and preventing irritation.
- Breathable.

Lining materials

- Orthoboom footwear uses only modern lining materials with unique properties: they can “breathe,” wick away excess moisture, regulate heat exchange, retain warmth, and keep cold from getting inside.

TEXTILE

WOOL

FLEECE

NATURAL FUR

Membrane footwear

High-tech climate footwear

- Footwear for active walks and travel.
- Lining — 100% natural wool, collar — fleece.
- Insole — 100% natural wool.

A waterproof membrane protects you in wet and rainy weather. The **WATERPROOF** sign confirms that after undergoing serious testing, the products remain dry inside.

Dense and wide toe box

- Protects the foot while walking.
- Helps ensure comfortable and roomy placement of the toes and their free movement.
- Increases the durability of the footwear.

Wide opening LowOpen

Wide opening and ease of putting the shoes on are achieved thanks to:

- the unique LowOpen upper construction,
- the use of various combinations of Orthoboom fasteners.
